

Parry Organic Spirulina

First to Receive USP Dietary Ingredient Verification Program Certification

Market-leading "Superfood".
Also First Spirulina Ingredient
to Comply with
USP Monograph for Spirulina.

When it comes to natural foods, both product developers and retailers spend millions of dollars a year creating brands that their customers can trust and relate to. Part of that brand is a promise of safety and quality. At Valensa and Parry, this promise is very strictly adhered to and with the revised USP DIVP certification that includes the food safety aspects to comply with US FSMA (Food Safety Management Act) is a validation of the same.

Parry Organic Spirulina, a microalgae-based superfood, is produced by Parry Nutraceuticals. This superfood has successfully passed the United States Pharmacopeia's (USP) voluntary and rigorous Dietary Ingredient Verification Program (DIVP). This certification shows compliance as per 21 CFR part 117 Current Good Manufacturing Practices, Hazard Analysis, and Risk-Based Preventive Controls for Human Food and USP <2750> Manufacturing Practices for Dietary Supplements. This allows the product to be compliant as per FSMA Act, USA.

This third-party assurance is a key recognition that Parry Organic Spirulina meets the highest quality standards and

stringently follows cGMP practices in compliance with officially recognized requirements. Parry's commitment to quality as evidenced by the USP DIVP certification is a form of "brand insurance" to its customers.

The USP DIVP certification also provides manufacturers of finished products with the ability to easily identify and qualify Parry Nutraceuticals and the sister company Valensa International as suppliers of quality organic Spirulina they can trust.

Parry Organic Spirulina is manufactured in Southern India, using purified groundwater, 100% vegan and organic certified nutrients. It also meets the highest global standards for Organic and is non-GMO verified.

World's Best Spirulina Nutrient Profile

The new & updated Certificate of Analysis for Parry Organic Spirulina (with USP logo) contains 32 parameters covered under product description, physical & chemical analysis, phyto-pigment analysis, fatty acid profile, microbial analysis, heavy metals and contaminants analysis. The key nutritional profile includes protein, phyto-pigment analysis (total carotenoids, beta-carotene, pure phycocyanin, chlorophyll A) & fatty acid profile (gamma linolenic acid, linoleic acid, palmitic acid, stearic acid).

Parry Organic Spirulina is carefully manufactured and processed to deliver the highest nutrient levels. The company has also upgraded its packaging of Parry Organic Spirulina to ensure freshness and protection of phyto-nutrients during storage and transportation.

About USP

USP is an independent scientific organization that collaborates with the world's top experts in health and science to develop quality standards for medicines, dietary supplements, and food ingredients. Through our standards, advocacy and education, USP helps increase the availability of quality medicines, supplements and food for billions of people worldwide.

For more information about USP, visit www.usp.org.

Dietary Ingredient Verification Program

USP's Dietary Ingredient Verification Program helps manufacturers demonstrate the quality of their dietary ingredients. The program can differentiate ingredients and help a company maintain its sales edge in a competitive global market. The program serves as a means of supplier qualification, potentially reducing audits from customers, and reduces the risk of inconsistent and substandard ingredient quality.

Offered to manufacturers worldwide. USP Dietary Ingredient Verification Services include GMP facility auditing, ingredient quality control and manufacturing documentation review, and ingredient testing. Participation is voluntary and ingredients that meet USP's stringent requirements are awarded the distinctive USP Verified Mark, making it easy for manufacturers of finished products to spot quality they can trust.

Parry Organic Spirulina, offered by Parry Nutraceuticals and Valensa International, has been added to USP's website

USP.org/verification-services/ingredient-verification-program, a resource for finished product manufacturers to identify ingredient manufacturers who have earned the right to use the USP mark.

For more information about USP's Dietary Ingredient Verification Program and the process by which Parry Nutraceuticals was awarded this certification, visit <https://www.usp.org/verification-services>.
